## BUSTER Sterile Aural Haematoma Compress Ear Support

Aural hematoma is a common clinical case. A pocket of blood develops a separation between the inside skin of the ear and the ear cartilage. Surgical treatment is directed towards restoring that skin to cartilage bond. BUSTER sterile aural othaematoma compress provides a compression pad that gives good ventilation and great cosmetic results. The pad consists of an inner, open, soft foam layer and one tougher outer surface where sutures are placed.
