

Reduces:

- Surgical site infections
- Hospital length of stay
- Surgical blood loss

Gaymar's Pediatric Quilt surrounds the baby in an active warming environment for use in the operating room, PACU or critical care.

Our Pediatric Quilts are designed for use under the patient when full body access is needed, or over the patient when complete access is not required. Both positions provide controlled warming close to the skin surface.

The nonwoven patient side is soft and non-irritating against the child's skin and the reverse side is plastic. The quilt's microvents release a consistent flow of warm air. The die-cut vents deliver additional active warming and also aid in the prevention of fluid pooling on the surface.

Whether you are an existing Thermacare user or converting to the whole system, your pediatric patients will benefit from the use of this specialized quilt.

THERMACARE®

Pediatric Under/Over Body Quilt

TC2061 – To assist in maintaining normothermia & preventing hypothermia in pediatric patients

☐ U.S.: 1.800.828.7341 Canada: 1.800.203.4293 716.662.2551 ☐ www.gaymar.com
